MI 349 Project Brief

Digital Resume Template

For my MI 349 final project, I want to create a digital resume/portfolio template that can be utilized for students and professionals. There is going to be a few pages for pictures, documents, projects, videos, and regular resume information. Because the project requires a complete site, no filler content, I will create a digital resume for myself to provide an example for possible clients. I think that this could be an extremely useful product for people looking to improve their digital presence. It is a complementary solution than LinkedIn, because it is unique and customizable to their individual needs. This template will include links to other relevant sites for the customer, such as GitHub, Twitter, blogs, and LinkedIn.
